Professional Summary

Versatile and detail-oriented Full-Stack Web Developer with hands-on experience in building responsive, user-focused web applications. Skilled in front-end and back-end development, API integration, database management, and modern frameworks. Known for strong problem-solving abilities, clean coding practices, and effective collaboration with cross-functional teams. Adaptable to evolving project requirements and committed to delivering scalable, high-performance solutions that enhance user experience and drive business impact.

Education

KIET Group of Institutions, Ghaziabad, India • B.Tech : Computer Science Of Technology CGPA: 8.78	Aug'24 - Present
Aparnaa World School, Jharsuguda, Odisha • Intermediate : CBSE PCM 92%	2021-2023
Saint Thomas English School, Jharsuguda, Odisha • 10th : ICSE 91%	2020-2021

Skills

- **Programming Languages:** HTML | CSS | Javascript | Java | MERN | Python
 - **Frameworks:** React | [Next.js](#)
 - **Databases:** MySQL | MongoDB
 - **Tools & Platforms:** Git | GitHub | Figma | Vercel | Docker | Nginx | Redis
-

Experience

NovaPrompt – AI Prompt Marketplace App

Freelance Full Stack Developer | Remote

- Developed backend systems and admin/superadmin dashboard with secure role-based access control for managing AI prompts and users.
 - Built scalable APIs and optimized platform performance; supported a production app with **10K+ Play Store downloads**.
 - Deployed using **Docker + Nginx**, improving scalability, reliability, and deployment efficiency.
-

Projects

1) CommunityHub- Social Notice board website | [GitHub](#)

- Developed a full-stack web application using the MERN stack (MongoDB, Express.js, React, Node.js) to streamline communication within a local community.
- Integrated role-based access control (RBAC) to ensure only authorized users can post updates, enhancing platform security.

2) GitRead – AI-Powered GitHub README Generator | [Github](#) | [Live link](#)

- Built an AI-powered platform that automatically generates professional, well-structured README files for GitHub repositories using repository metadata and code context
- Integrated GitHub App authentication and webhooks to securely access user repositories and trigger README generation on installation or repository events

- Implemented background job processing to handle README generation asynchronously, ensuring scalability and smooth user experience.
-

Role of Responsibility

Devup | Coordinator

- Coordinated and managed **development-focused initiatives** within the club to enhance students' technical skills and collaboration.
- Organized and supervised a coding contest, where I invigilated 42 students to ensure fair participation by monitoring and preventing the use of AI tools.
